General Options

Authentication Method

The authentication class to use to validate cookie data and longins. You may need to edit the actual file for certain authentication systems.

Default

Allow New Registrations

If this is set to yes, then new users will be allowed to register.

☒ Yes ☐ No

Require Activation Email

Setting this to yes will force all new users to verify their account with an email activation link.

☒ Yes ☐ No

Moderate New Users

All new users will have to be approved by the administration before being able to have normal user rights.

☐ Yes ☒ No

Send New Use Welcome Email

Setting this option to yes will send each new verified user a welcome email.

☐ Yes ☒ No

Webmaster Email Address

The email address from which emails will be sent out.

desarrollo@videoedicion.org

Tracker Title

The global name of the bug tracker. Example: Blue Static Bug Tracker

Desarrollo - videoedicion.org

Tracker Base URL

The base URL of the tracker. This is used when creating external links to the tracker. **Be sure that this does not end in a trailing slash ("/").**
Example:
http://www.bluestatic.org/bugs

http://www.videoedicion.org/de

Date Format

Set the date format used for bug report and comment information. This is based on PHP's date() function.

F j, Y h:i:s A

Default Time Zone

This controls the time zone that all unregistered users view the tracker with.

(GMT + 1:00) Berlin, Madrid, Paris

Default Language

You can set the default language that all new users (and guests) will use.

Spanish

Number of Syndicated Items

The number of bugs to be syndicated at any one time by the Atom XML feed.

Use Header Redirects

Instead of displaying an intermediate page informing the user that their action was a success and a redirect is occurring, just send the user to the next screen using HTTP headers. This can save bandwidth.

☐ Yes ☒ No

Bug Reporting Options

Allow HTML in Bug Reports

Set this to yes if you want to allow users to post raw HTML in their bug reports. This is **very** dangerous and it is not recommended.

☐ Yes ☒ No

Default Severity

The default severity that is selected when creating a new bug report.

Default Priority

The default priority that will be selected when creating a new bug report. Depending on your permission setup, the user may not be able to set this in a new report so this will act as the value.

Default Status

The default default that is selected when creating a new bug report. If a user can not assign a status, this will be the one inserted into the database.

Default Resolution

This is the default bug resolution. If a user is not able to change this field, setting this will act as the default value.

Default Bug Assignment

This is the default developer new bugs will be assigned to. If a user does not have permission to assign bugs, this will be the default. If you don't want any default assignment, leave this as *Not Selected*.

Default Comment Text

If you wish to set a template for entering the initial comment of a bug report, then you may specify this here. However, the template will only take effect on the initial report/comment. Note: the template cannot be forced on the user as there is no way to validate it.

Bug Listing Display Options

Hide Statuses on Bug Listings

Here you can specify which statuses to hide on the bug list displays. Users have options in their controls to change this from these values, and this does not affect searches or the favorites list.

Nueva revisión

Default Sort Column

Select the column to sort bugs by on listings. This is only a default setting which users can override in their preferences.

Default Sort Direction

Specify the default direction to sort bugs in the selected column. This works with and follows the same rules as the Sort Column.

Descending ▾

Default Column Ordering Options

Specify the order of the columns for bug listings. The value 0 disables the display of a column and if two or more columns have the same position number, they will be displayed in the same column.

ID	1
Summary	2
Reporter	2
Product	3
Component	0
Version	3
Status	4
Resolution	4
Priority	5
Severity	5
Last Post	6
Votes	0
Assigned To	0

Pagination Options**Default Per-Page Amount**

The number of items (e.g. bugs) to be displayed on a page by default. The user will have the option of over-riding these values.

20

Maximum Per-Page Value

To prevent your server from experiencing load problems, set the maximum per page limit. Specifying a value here will make sure any user-entered value will not be higher than this, preventing server load problems.

100

Number of Page Links

The number of pages that will appear in the page navigation system on either side of the current page. Set this to 0 to display all pages.
